Breast Screening Key Messages

**ANSWER
CANCER**

Key Messages:

If it's unusual for you – see your GP

You should check your breasts regularly so that you know how they look and feel. This lets you spot any changes as soon as possible.

Early detection saves lives

Those who regularly attend screening will have any early changes picked up usually **before** they turn cancerous.

Those who regularly self-check and visit their GP if they have any changes, will have these changes diagnosed early. This means that treatment options and health outcomes are often better.

Breast screening saves lives

Breast screening can find cell changes early, before they become cancerous.
